Project Manager with 5 years of experience delivering complex digital products in multi-team, multi-vendor environments. Experienced in both enterprise-level product development and digital agencies. Worked as:

— **Delivery Manager** in a real estate company, overseeing 6 teams (50+ specialists). My main focus was aligning teams and stakeholders, ensuring transparency and predictability of delivery, planning, and release cycles.

  Key results: scaled engineering teams from 35 to 53 members, hired and mentored 5 project managers, reduced time-to-market for landing pages from 2 weeks to 1 day, improved page load time from ~7s to <3s.

— **Project Manager** in a digital agency, leading 1-3 teams of up to 23 people. I worked on multiple projects, both building products from scratch and supporting existing platforms.

  Key results: delivered 7 web projects, increased profitability by 30%, maintained client satisfaction at 8.9/10.

I am highly independent, structured, and comfortable operating in fast-paced environments. I focus on understanding the business context, setting up clear processes, and building open, collaborative relationships with my team. I also have a background in QA, which shaped my strong attention to product quality and release stability.

Background in: e-commerce, real estate platforms, CMS, and B2B tools, specializing in customer-facing digital platforms.

Expertise: Agile frameworks (Scrum, Kanban, LeSS, SAFe), Waterfall; Web Development, Software Development Life Cycle (SDLC); Project Delivery, Program Management, Incident Management, Release Management; Stakeholder Management, Risk Management, People Management, Budget & Resource Management, Mentorship

Tools: Atlassian (Confluence, Jira), Google Workspace, Figma, Miro, Notion, Draw.io, Smartsheet, Productboard

Languages: English, Russian

Work experience

Delivery Manager | SAMOLET (via outstaff) **Sep 2023 – Feb 2026 (2 years 6 months)**

The largest nationwide real estate developer of residential and commercial properties. The company develops its own digital platforms that automate the full cycle of online sales and client interaction, including a **high-load website with 5M MAU and a customer account platform with online apartment purchase, internal B2B and CMS tools**.

— **Organizational Leadership:** Coordinated 6 distributed remote teams (53 specialists: engineering, design, project managers) in a multi-vendor environment with an outstaff team of 4 contractors. I was responsible for balancing workload, planning, managing cross-team dependencies and priorities, and overseeing release cycles across all teams.

— **People Management:** Hired and onboarded 5 project managers, acting as their direct manager – mentoring and supporting them in leading their teams. Led the team's growth from 35 to 53 members. Oversaw onboarding and ensured processes scaled in line with the growing team, budget, and workload.

— **Incident Management:** Reduced mean time to resolution (MTTR) for incidents and production issues to 1–2 days and cut the number of CRM integration bugs from ~300 to <40 per month. Improved incident management by implementing classification, prioritization, Kanban methodology, automated dashboards, and standardized procedures.

— **Release Management:** Facilitated delivery across multiple teams within a Large-Scale Scrum framework (LeSS) with quarterly planning. Streamlined regular releases (twice a week) for a high-load website. Introduced clear guidelines, a release calendar, new roles, and expanded the number of test/staging environments.

— **Team Coordination & Technical Initiatives:** Alongside cross-team coordination, I directly managed one of the six development teams (4 developers, tech lead, and QA engineer) focusing on technical initiatives and optimization.

With this team:

— Accelerated launch time of new pages from 2 weeks to 1 day. Initiated a new project – a no-code builder for creating website landing pages, assembled and managed the development team. This accelerated the rollout of client services and marketing campaigns;

— Led an initiative to improve site performance, reducing page load times from ~7 to <3 seconds, improving user experience and SEO. Migrated key pages from Vue 2 to Nuxt 3, implemented CDN and caching, optimized backend requests.

Project Manager | IDA PROJECT **Jun 2021 – Aug 2023 (2 years 3 months)**

Digital agency, recognized as a top employer and industry expert. The agency provides outsourcing and outstaffing services for real estate clients, offering end-to-end support from business analysis and UX/UI research to development and process optimization, covering websites, marketplaces, client/agent portals, and online transactions.

- **Engineering Team Leadership:** Managed 1–3 engineering teams (up to 23 people, with backend and frontend scope) in a high-pace IT environment. Facilitated Agile ceremonies (stand-ups, sprint planning, retrospectives, reviews), monitored progress and timelines, resolved blockers, and ensured sprint delivery.
- **Project Delivery:** Led end-to-end delivery of 7 projects, including new website builds from scratch and long-term platform support. Drove new feature rollouts, UI/UX improvements, redesigns, integrations, code refactoring, performance optimization, monitoring, CI/CD.
- **Planning:** Implemented a backlog prioritization system to coordinate tasks among various types of stakeholders, ensuring alignment with business goals. Developed a sprint capacity planning model (Excel-based) to improve resource allocation, forecast team workload, and balance tasks.
- **Stakeholder Management:** Acted as main contact between clients and the internal team. Communicated with stakeholders (product managers, C-level executives), external vendors and internal client teams (CRM, SEO, marketing, sales, finance, legal), handling status updates, gathering requirements, preparing project documentation and presenting final results. Maintained high client satisfaction (CSAT) at 8.9/10 across monthly client surveys.
- **Budget Management:** Coordinated financial processes with the clients and ensured project profitability (hourly rates, team salaries). Revised the hourly billing approach for one client, increasing agency profitability by 30%.
- **Product Collaboration:** Worked with the product backlog and collaborated closely with the product manager. Contributed to product growth: participated in UX research, launched A/B tests, and worked with analytics tools.

QA Engineer | IDA PROJECT **Nov 2020 – May 2021 (7 months)**

- Performed manual testing of web applications (UI/UX testing, cross-browser compatibility, responsiveness, including BrowserStack) and validated new features before release and performed regression, smoke, and integration testing.
- Identified, documented, and tracked defects using bug tracking systems. Created and maintained test documentation (test cases, checklists).

Lawyer | Tenzor Consulting Group **Sep 2017 – Sep 2020 (3 years 1 months)**

Lawyer | Legal Expert **Feb 2016 – Jul 2017 (1 years 6 months)**
